

John Robinson Associates

Utility Survey Specialists & Consultants

The problem.

- What type of utility surveys do I need, What specification or methods are needed?
- What the end deliverable shall be? Will it be accurate?
- Is the cheapest price the best solution? Will it detect all underground utilities we need? Will it lead to further problems??

The Reality

Successful Utility Surveys comprise of the following factors.

1. Robust survey specification and appropriate methodologies used both on site and office
2. Robust and active project managers
3. Appropriate survey equipment used plus the talent, experience, training and qualifications of those undertaking the survey
4. Due diligence and quality assurance

The solution

- We have a range of pre-selected, quality assured utility survey providers that are qualified (minimum QCF level 5) able and experienced to undertake a range of surveys to PAS128 specification
- Assess and QA survey deliverable data
- Advise on any further survey applications that can enhance the quality of the survey data
